SAHAS GOLI

+1 (408) 797-7244 | sg2636@cornell.edu | San Francisco, CA, USA | linkedin.com/in/sahasgoli | github.com/sahas-goli

EDUCATION

Cornell University – College of Arts and Sciences Aug 2024 – May 2028
Bachelor of Arts, Computer Science & Applied Math *GPA: 3.9*

Relevant Coursework: Machine Learning, Algorithms, Data Structures & Functional Programming, Systems Programming, Computer Architecture, Discrete Math, Probability & Statistics, Simulation Modeling, Linear Algebra, Multivariable Calculus, Differential Equations

PROFESSIONAL EXPERIENCE

Artificial Intelligence Materials Institute June 2026 – Present
ML Research Intern *Ithaca, NY, USA*
- Built an end-to-end, reproducible Bayesian optimization framework for low- and high-dimensional multi-objective optimization.
- Introduced a composite-structure algorithm outperforming existing methods by 20% across synthetic and scientific benchmarks.
- Authored a paper accepted to AI4Mat @ NeurIPS 2026, evaluating 8 solvers on 11 synthetic and scientific benchmarks.

Pensieve.co June 2025 – August 2025
Software & AI Intern *San Francisco, CA, USA*
- Built an AI grading system to automate classroom scoring, reducing instructor workload and standardizing feedback.
- Fine-tuned foundational models against instructor evaluations, achieving 95% scoring alignment and boosting trust in automations.
- Extracted and processed classroom datasets to create structured training data, accelerating AI model development.

University of California – San Diego January 2025 – June 2025
Data Specialist *La Jolla, San Diego, CA, USA*
- Researched the yield differential between green and conventional bonds, delivering a detailed comparative analysis framework.
- Retrieved fixed-income data via Bloomberg Terminal and constructed custom US corporate bond indices for market benchmarking.
- Built a data-gathering and filtering methodology for green bond identification, ensuring compatibility with econometric models.

IBM June 2023 – August 2024
Software Intern *Remote*
- Developed JAX-RS APIs to replace slow retrieval calls, accelerating access by 30% for Cognitive Telescope Network researchers.
- Implemented image-generation algorithms to address low-resolution telescope outputs, boosting clarity for research analysis.
- Optimized API functionality with the engineering team to resolve reliability issues and increase uptime for real-time workflows.

Thermo Fisher Scientific March 2022 – August 2023
Software Intern *Pleasanton, CA, USA*
- Overhauled genome libraries misaligned with updated NCBI databases and DNA-sequencing guidelines to meet current standards.
- Collaborated with cross-functional teams to tackle high error rates in microbe identification, reducing data errors by 15%.
- Integrated new sequencing guidelines into microbial genome pipelines, ensuring compliance with latest genomic standards.

PROJECTS & OUTSIDE EXPERIENCE

Cornell Blockchain October 2025 – Present
Investments Team *Ithaca, NY, USA*
- Won 1st Place at Penn Blockchain Conference Hackathon 2026 for Phantom Pool, a privacy-preserving prediction-market dark pool with off-chain price-time matching, iceberg execution, cross-chain settlement (Polygon/Solana/TRON), and AI news-signal routing.
- Built a Rust 2SLS causal graph engine (SVD-stabilized OLS, Hausman/Sargan/first-stage-F diagnostics) to predict DeFi asset returns.
- Contributed to DormDAO's off-chain stack on Base L2, building strategy engines and trade intent for spot, perp, and options routing.

Student Foundation Investment Committee UCSD September 2024 – June 2025
TMT Analyst, Quantitative Analyst *San Diego, CA, USA*
- Helped manage a $1.3M+ endowment portfolio, ensuring 100% of returns funded UCSD student scholarships.
- Conducted DCF model-driven equity research via Bloomberg Terminal and risk parity analysis for a balanced industry risk profile.
- Built an Analyst Hub with web scrapers, LLMs, and SMTP news alerts, streamlining research for asset management teams.

Sustainable Investment Group at UC San Diego September 2024 – June 2025
Quantitative Analyst *San Diego, CA, USA*
- Automated DCF valuation in Excel VBA using LSEG and applied ARIMA and GARCH to ESG metrics for sustainable investing.
- Developed an adaptive pairs trading crypto strategy using deep Q-Learning, HMMs, and Bayesian inference.
- Represented UCSD at UCLA DataFest with a multi-factor vector autoregression model improving leasing forecast accuracy.

Triton Quantitative Trading September 2024 – June 2025
Competition Team, Board Member *La Jolla, San Diego, CA, USA*
- Solved time-limited Fermi-style estimation problems in the Jane Street San Diego Estimathon, earning first place.
- Developed a momentum-based mega-cap equity strategy with Monte Carlo optimization, winning Open-Quant League 2025 Q1.
- Organized and hosted seminars on risk management, options, and pricing strategies, equipping teammates with advanced insights.

ADDITIONAL INFORMATION

Skills: Java, Python, C, OCaml, RISC-V Assembly, OOP, DSA, NumPy, Pandas, Data Science, Financial Modeling, Business Analytics
Achievements: USA Computing Olympiad Gold Medalist, AIME Qualifier, Top 300 in IMC Prosperity 4 Algorithmic Division
Languages: English (fluent), Telugu (fluent), Spanish (elementary)
